

CYBERSECURITY TRAINING — MODULE 4

N.E.S.T. Framework Card — Section 508 Text Equivalent

Accessible alternative content for the interactive N.E.S.T. tab/accordion widget

Purpose

The "N.E.S.T. Framework" slide presents its content as four expandable tabs (N, E, S, T) that a sighted, mouse-using learner clicks open one at a time. Screen reader users and keyboard-only users need the same information available without relying on that interaction. The two sections below give you (1) a linear text equivalent that conveys everything the card contains in reading order, and (2) short accessibility name/description strings to paste into each tab object's Properties → Accessibility field in Captivate, so the object announces meaningfully when it receives focus.

1. Linear Text Equivalent

Use this as the slide's off-screen text equivalent, or as narration/caption text: it reads the full content in order without requiring any tab to be clicked.

The N.E.S.T. Framework. Follow these four steps the moment you suspect a breach — weird pop-ups, locked screens, or accidental clicks. Doing nothing is often far better than attempting your own fix. This interactive element has four sections, listed below in order.

- 1. N — Notice & Stop (Minute 0):** Hands off the keyboard and mouse — no more clicks.
- 2. E — Extract from the Network (Minute 2):** Cut the connection: Wi-Fi off, Ethernet unplugged.
- 3. S — Signal Your Team (Minute 5):** Call it in to IT/Security — don't wait to be sure.
- 4. T — Transfer Control (Hour 1):** IT takes over: clean, verify, and safely restore.

2. Per-Tab Accessibility Name/Description

Paste one string per tab into that object's Accessibility field so a screen reader announces the tab's content and state on focus, not just its visible label.

Tab	Accessibility Name/Description string
N	N — Notice & Stop. Minute 0. Hands off the keyboard and mouse — no more clicks. Button, collapsed. Activate to expand.
E	E — Extract from the Network. Minute 2. Cut the connection: Wi-Fi off, Ethernet unplugged. Button, collapsed. Activate to expand.
S	S — Signal Your Team. Minute 5. Call it in to IT/Security — don't wait to be sure. Button, collapsed. Activate to expand.
T	T — Transfer Control. Hour 1. IT takes over: clean, verify, and safely restore. Button, collapsed. Activate to expand.

Note

This replaces any earlier 508 text equivalent written for the module's prior "S.A.F.E." model card — that content should be retired along with the S.A.F.E. naming so the accessible version and the visual version stay in sync.
